

## Cumberland Regional High School

As an academic and community facility, the performing arts center at the Cumberland Regional High School is used frequently for a wide range of events. There were several challenges and concerns hindering efficient use of space. The district focussed on the students and aimed to provide the best and safest education environment possible.

Hewshott completed an initial inspection, and various safety deficiencies were identified throughout, including theatrical systems that required continual maintenance with specialised lifts.

Hewshott designed a rigging, curtain, and theatrical lighting system which enabled a safe and improved theatre. Lighting system upgrades enabled control by a network-based power and control system. The house lighting upgrade provided increased illumination level appropriate for learning.

Hewshott was commended on their attention to detail and excellence brought to the project and once construction was complete, the district unveiled the enhanced theatre to the students, staff and administration. The revamped theatre is well-equipped, safe and ready to support the students and programs for many years to come.
