

## Polestar of Princeton

As a leader in unique and innovative vehicles, Polestar engaged Hewshott to provide advice and recommendations on the required lighting systems for their dealership in Princeton, New Jersey. This also included a review of the integration of lighting systems with audio visual technology.

The architectural lighting was furnished by the owner, but not the lighting controls. As the contractors were fitting out the new store, they discovered the gap in scope. Penn Valley Constructors engaged Hewshott to immediately dive in and devise a solution. Because the lighting documentation was lacking, and all the lighting was on site, we surveyed and inventoried all products.

As we were performing our work, the project schedule could not accommodate any delays. The electrician and other trades had to continue working. We regularly supported the electrician answering questions and advising on wiring topology, zoning, and circuiting.

During design, we learned that the owner required the AV system to control the lighting. With AV as a core competency of Hewshott, we understood both AV and lighting systems and elegantly integrated the systems.

The project was successfully completed on schedule.
